

AUTOMOTIVE COMPONENTS – PRODUCT/ MARKET MATRIX

AUTOMOTIVE COMPONENTS - GROWTH EXPORT MARKETS AND PRODUCTS: 2015 – 2019

The business community, inside and outside of South Africa, has a need for information on various aspects affecting investment and business ventures in the country in order to maximise the value of every decision or transaction. The aim of the Product/Market Matrix 2015 – 2019 detailed analysis of South African automotive exports is to leverage a wealth of market intelligence related to decision-making opportunities in the South African automotive industry.

AUTOMOTIVE COMPONENTS – PRODUCT/MARKET MATRIX 2015 – 2019

In 2019, the domestic automotive industry once again excelled on the export side, despite facing domestic and foreign economic headwinds. The export value of vehicles and automotive components comprised a record R201,7 billion, equating to 15,5% of South Africa's total exports of R1 297,0 billion. A record 387 125 vehicles worth a record R148,0 billion, along with a record R53,7 billion in automotive components, were exported to 151 countries in 2019.

The requirements for successful export growth include economies of scale, cost competitiveness, reliability of supply, and just-in-time delivery performance. A diverse range of original equipment components and aftermarket parts are manufactured in South Africa. A NAACAM analysis indicates that 48,9% of domestic component suppliers' turnover sales of R89,2 billion in 2019 went to the OEMs, 33,4% to exports, 14,5% to the aftermarket, and 3,2% to other component sales.

The focus of the South African automotive industry is to expand on existing exports and to escalate the importance of seeking new markets and new export opportunities. The country's established export markets in the Eurozone and North America remain important. However, Africa and Asia have also become important destinations for South African automotive products. It remains essential for the domestic automotive industry to continue diversifying risk by pursuing a wider geographical exposure to mitigate the impact of country or regional cyclical economic conditions. Diversification into new emerging markets is a continuing trend and underlines the automotive industry's competitiveness drive and the continuous widening of the country's traditional trading base.

The aim of the Product/ Market Matrix 2015-2019 is to identify further export opportunities for the South African automotive industry based on a detailed analysis of growth products and growth markets over a five-year period.

Vehicle exports

South Africa manufactures a broad range of vehicles, including passenger cars, light commercial vehicles, medium commercial vehicles, heavy commercial vehicles, extra-heavy commercial vehicles and buses. A record number of 387 125 left- and right-hand drive vehicles, up from the 351 139 vehicles in 2018, were exported to 105 country destinations around the world in 2019. Passenger car exports comprised 260 843 units, or 67,4% of the total; light commercial vehicles comprised 125 455 units, or 32,4% of the total; and medium and heavy commercial vehicles and buses comprised 827 units, or 0,2% of the total. In 2019, light vehicle (passenger cars and light commercial vehicles) exports accounted for a significant 64,1% of total domestic light vehicle production. Scale is one of the imperatives pursued by the South African automotive industry, and in 2019, two models achieved production volumes in excess of 100 000 units. Significant rationalisation of the production of light vehicle models in South Africa has taken place under the MIDP and the APDP, resulting in a reduction from 42 platforms in 1995 to 11 platforms in 2019.

Exporting remains key to generate sufficient economies of scale and achieving improved international competitiveness. Most domestic OEMs have grown their volumes substantially and now produce a very high proportion of vehicles for the export market. Once a vehicle is exported, it creates further opportunities for replacement parts exports. The following table reveals that the top export destinations for passenger cars and LCVs in terms of number of units in 2019 above 1 000 units were the UK, Germany, Japan, and France. VWSA, with its Polo model, topped the country's export rankings in 2019. Export country destinations for which the export volumes **more than doubled** from 2015 to 2019 have been highlighted in **yellow** in the following table.

Top destinations for light vehicles (passenger cars and light commercial vehicles) exported – 2015 to 2019

Source: NAAMSA/Lightstone Auto, SARS

Exports of medium and heavy commercial vehicles and buses comprised only 0,2% of the total vehicle exports in 2019, which in relation to passenger cars and light commercial vehicles, has been relatively insignificant in terms of total vehicle export volumes. However, for the heavy commercial vehicle and bus sector, exports remain a priority focus in achieving higher vehicle production volumes in view of a weak domestic market.

The following table reveals that the main export destinations for trucks and buses have consistently been South Africa's neighbouring countries in the Southern African Development Community (SADC) region. Zimbabwe was the overall top destination for all truck and bus exports in 2019, and this included extra-heavy commercial vehicles, heavy commercial vehicles, and buses, while for medium commercial vehicles the top destination was Mozambique. Export country destinations for which the export volumes **more than doubled** from 2015 to 2019 have been highlighted in **yellow** in the following table.

Automotive component exports

The automotive component sector in South Africa consists of a diverse group of various tier-level automotive suppliers. There are in the order of 180 first-tier suppliers, of which about 75% are foreign multinational companies. A wide range of original equipment components and aftermarket parts are manufactured in South Africa. Technology is currently the dominating factor in supplier strategy, as automotive component suppliers are rushing into new technologies to deliver the grand vision of the automotive industry – electric vehicles, connected cars and autonomous driving. The cost of remaining in the contest has gone up in the past few years, and only the biggest suppliers can afford the rising costs of acquiring the technologies that will make the industry's vision become a reality. The ability of suppliers to grow remains dependent on satisfying customers. Firms must focus on meeting customer requirements, performing against competitors and being viewed as long-term suppliers, as well as unlocking additional growth avenues and opportunities.

There are certain eligibility requirements under the APDP to ensure that the beneficiaries are companies producing substantial quantities of components for vehicle manufacturing, and to exclude accessories. The requirements include that automotive component manufacturers have to supply at least 25% of their total turnover, or R10 million annually, as part of an OEM supply chain domestically and/or internationally to comply under the APDP. Domestic automotive component manufacturers are active in the export market, selling their products into international OEM supply chains.

Top automotive component exports by value – 2019 (R million)

Source: AIEC, SARS

The following table reveals the automotive component export ranking by product category from 2015 through to 2019. In 2019, automotive component exports increased by 4,6% to R53,7 billion, from R51,3 billion in 2018. South Africa remains a strategic supplier of catalytic converters to the world, and by value, this component category maintained its dominant export position under the APDP in 2019, as the focus of exporters tends to be on high-value domestically beneficiated, logistics-friendly automotive components. The increased performance in engines and engine parts exports relate to the EA111 engine for the VW Polo and Polo Vivo, and the Duratorq TDCi turbodiesel engine for the Ford Ranger, Ford Raptor and Ford Everest sports-utility vehicle, both linked to export programmes, and which are manufactured in South Africa, illustrating the country's manufacturing capabilities.

Automotive component export ranking by product category – 2015 to 2019

The following tables reveal the product/market matrix for the top 10 destinations for the automotive product category exports from South Africa from 2015 through to 2019. The export values of the latest year (2019) are used to rank the component categories in order of priority, from the most to the least important export country destination. Growth markets are reflected in yellow in those instances where there was a **5 or more percentage** point growth in exports over the past five years.

AUTOMOTIVE COMPONENTS – EXPORTS BY COUNTRY

The following table reveals that the main destinations for automotive component exports have been first-world markets. Germany has remained the South African automotive industry's top export destination for component exports for the past three decades. However, emerging markets are starting to feature as important export destinations for the country's automotive component exports, indicating progress in the South African component manufacturers' ability to compete globally.

Top automotive export destinations by value – 2019 (R million)

Source: AIEC, SARS

Countries for which the export values **more than doubled** from 2018 to 2019 have been highlighted in **yellow** in the following table.

Source: AIEC, SARS

The following tables reveal the automotive component export details for the 115 export destinations recording an export value above R10 million of the total automotive component export value of R53,7 billion in 2019. Vehicle production and vehicle sales for 2019, obtained from the International Organisation of Motor Vehicle Manufacturers (OICA), have been included for the respective countries, where applicable. Relative high-volume light and heavy commercial vehicle exports of South African manufactured vehicles have also been included in order to identify potential replacement parts exports to the respective countries. Export categories for which the export values **more than doubled** from 2015 to 2019 have been highlighted in yellow in the following tables.

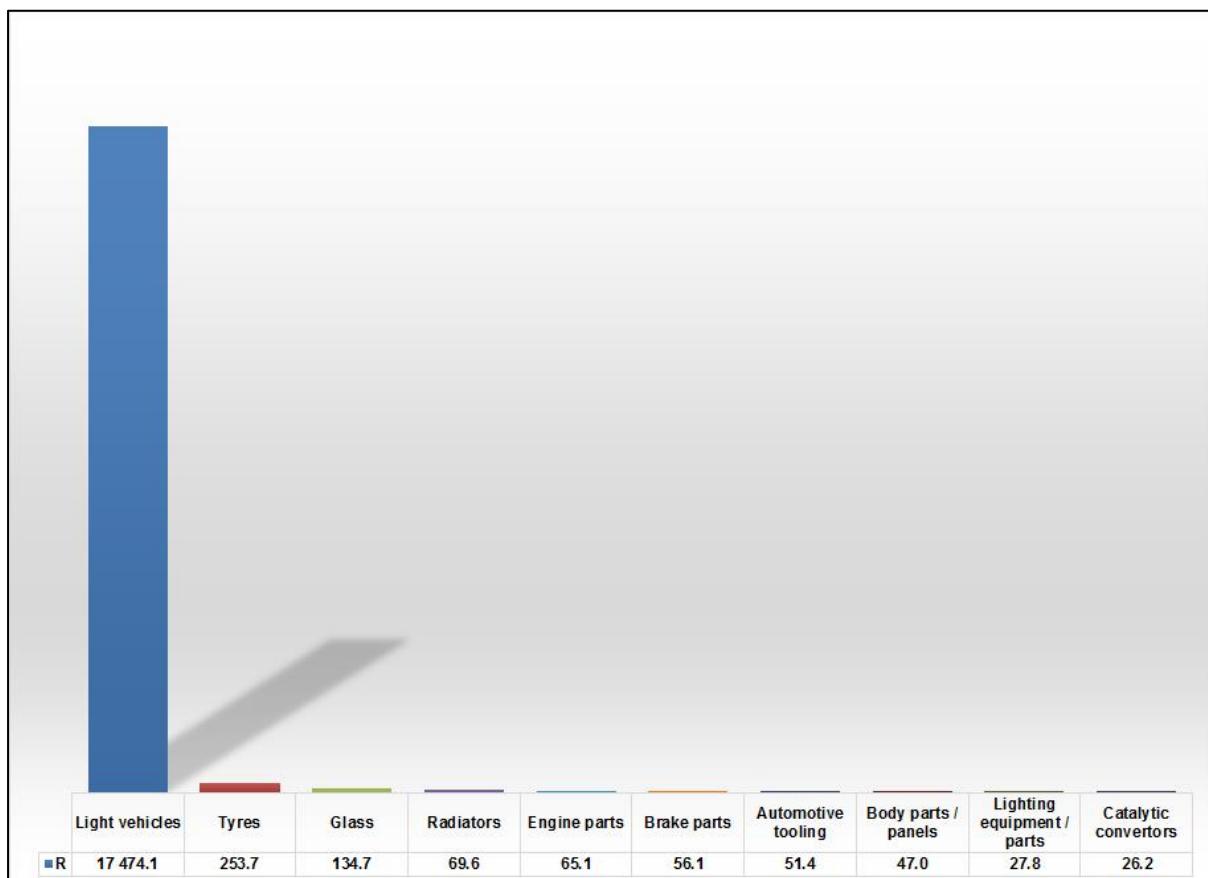

1. GERMANY (left-hand drive)
(Vehicle production 2019 – 4 661 328 units) (Vehicle sales 2019 – 4 017 059 units)

Standard disclaimer

The trade data is based on eligible APDP products. The AIEC cannot vouch for the accuracy of the information obtained from the sources. Due to certain limitations, Customs and Excise statistics cannot always distinguish between automotive components eligible in terms of the APDP and non-APDP components. The main purpose of this trade data is to discern trends in exports and export destinations, as well as imports and countries of origin.
